

With three flame laminators, which bond foam to industrial fabrics, and one adhesive laminator, which bonds different types of fabric together, over the past 23 years Bondtex Inc. has become a well-known custom lamination company across various industries. However, unique capabilities aren't the only factor of Bondtex's superior reputation; the company's dedication to providing inclusive unparalleled quality has also attributed to Bondtex's success. In fact, Bondtex has even been awarded an ISO/TS 16949 certificate due to the company's commitment to excellent quality.

One way Bondtex ensures the highest quality products and services is by using the latest and most efficient technologies available. When looking for "state-of-the-art" pollution abatement equipment, Mack Brown, Plant Manager, stated "we decided to have [Stelter & Brinck](#) design and manufacture our oxidizer due to their reputation for high-quality, reliable products". When it came time to purchase an additional oxidizer, Brown explains that, "Based on our experience and success with our first S&B oxidizer, we didn't even consider any other manufactures for our second unit." After working closely with S& B on two capital projects, Brown says, "When we hand over our projects to S&B, we know we don't have to worry about anything! S&B takes absolute ownership of our projects and keeps us informed at every stage." He goes onto state, "Stelter & Brinck's quality of work is excellent; we depend on S&B's equipment to keep us environmentally friendly, eliminate affluent, and pass all inspections."

Elated with Stelter & Brinck's oxidizers, Brown also looks to S&B for combustion equipment upgrades and field service. He believes, "S&B's techs are very professional and always deliver; they are a great group of individuals who come in and do the job right." Brown goes on, "In fact, altogether, S&B has a great team- from customer service to the technicians out in the field- everyone is accommodating and willing to take care of all and any problems that arise". He states, "We rely on Stelter & Brinck's machinery and staff to keep things running and they do- therefore, we don't have the frustrations and costs of downtime. This allows us to provide quality products to our customers on-time, every time." He goes onto say, "Anyone looking for combustion or environmental equipment and service would be making a mistake to look anywhere else for their needs, but Stelter & Brinck. The only recommendation I have for S&B is to keep up the good work!"
